BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ **BLACK BORDERS**
- ☐ **IMAGE CUT OFF AT TOP, BOTTOM OR SIDES**
- ☐ **FADED TEXT OR DRAWING**
- ☐ **BLURRED OR ILLEGIBLE TEXT OR DRAWING**
- ☐ **SKEWED/SLANTED IMAGES**
- ☐ **COLOR OR BLACK AND WHITE PHOTOGRAPHS**
- ☐ **GRAY SCALE DOCUMENTS**
- ☐ **LINES OR MARKS ON ORIGINAL DOCUMENT**
- ☐ **REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY**
- ☐ **OTHER:** _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.

EXAMINER

HOFFMAN, BRANDON S

ART UNIT PAPER NUMBER

2136

DATE MAILED: 09/30/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/692,709

Applicant(s)

GEHRMANN ET AL.

Examiner

Brandon Hoffman

Art Unit

2136

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 July 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 3-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1 and 3-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____

DETAILED ACTION

1. Claims 1 and 3-23 are pending in this office action. Claim 2 having been cancelled.
2. Applicant's arguments filed July 14, 2004, have been fully considered but they are not persuasive.

Rejections

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

4. Claims 1, 3-6, 17, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Merging and Extending the PGP and PEM Trust Models – The ICE-TEL Trust Model, Chadwick et al., May/June 1997 (hereinafter referred to as Chadwick et al.).

Regarding claims 1 and 17, Chadwick et al. teaches a method/ad hoc communication network for establishing security in an ad hoc communication network, the ad hoc communication network comprising:

- A set of communication nodes (fig. 2, pg. 20),

- At least two nodes of the set of communication nodes having a mutual trust relation and comprising a trust group (pg. 20, right column, first full paragraph),
 - The trust relations being created with public keys, and at least one additional node (fig. 4, pg. 22),
 - The at least one additional node being a candidate node for joining the trust group within the ad hoc communication network (pg. 22, left column, first paragraph),
- The nodes having authority to delegate trust to nodes of the set of communication nodes within the trust group (pg. 20, "Certification Path"),
- The method comprising the steps of:
 - Receiving a request from the candidate node to join the trust group within said ad hoc communication network wherein said ad hoc communication network does not include a separate certificate authority (pg. 20, left column, last paragraph, see 'Response to Arguments' section);
 - Identifying a node of the set of communication nodes within the trust group having a trust relation with the candidate node (pg. 20, right column, "Cross Certification"), the node having the trust relation with the candidate node being an X-node; and
 - Distributing trust relations between all members in the trust group and the candidate node by means of the X-node distributing the public key associated with said candidate node to said all members of the trust group (pg. 19, right column, last paragraph).

Regarding claims 3-5, Chadwick et al. teaches wherein the ad hoc communication network comprises a single trust group and a single candidate node (fig. 1, pg. 18), and wherein the distributing step comprises the X-node sending a signed message comprising a list of nodes that the X-node trusts within the ad hoc communication network and all corresponding public keys to the candidate node (pg. 20, left column, first paragraph).

Regarding claims 6 and 18, Chadwick et al. teaches wherein the ad hoc communication network comprises a set of nodes comprising several trust groups (fig. 4, pg. 22), each of the set of nodes being candidates for joining all trust groups within the ad hoc communication network that the set of nodes are not already a member of (pg. 22, left column, second paragraph), the method comprising, after receiving the messages, each node of the set of nodes creating a list of candidate nodes that a given node of the set of nodes trusts and corresponding public keys (pg. 22, left column, first paragraph).

Claim Rejections - 35 USC § 103

5. Claims 7-16 and 19-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chadwick et al. in view of Morris et al. (U.S. Patent No. 6,691,173).

Regarding claims 7 and 19, Chadwick et al. teaches all the limitations of claims 1, 2, & 6, and 17, respectively, above. However, Chadwick et al. does not teach further

Art Unit: 2136

comprising deciding one node within the ad hoc communication network to act as a server node.

Morris et al. teaches further comprising deciding one node within the ad hoc communication network to act as a server node (col. 4, lines 49-56).

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine further comprising deciding one node within the ad hoc communication network to act as a server node, as taught by Morris et al., to the method/network of Chadwick et al. It would have been obvious to one of ordinary skill in the art to combine deciding one node within the network to act as a server node, as taught by Morris et al., with the method/network of Chadwick et al. because the 'server' node can facilitate internetworking between two different trust groups.

Regarding claim 8, the combination of Chadwick et al. in view of Morris et al. teaches further comprising the server node receiving, from each other node within the ad hoc communication network, a message comprising a respective public key, a respective list of candidate nodes that the respective node trusts, and corresponding public keys (see col. 3, line 49 through col. 4, line 2 of Morris et al.).

Regarding claims 9 and 20, the combination of Chadwick et al. in view of Morris et al. teaches further comprising the server node classifying the at least one candidate

Art Unit: 2136

node as being a server-trusted node or as being a server-untrusted node, depending on whether the server node trusts the at least one candidate node or not (see pg. 22, left column, second paragraph of Chadwick et al.).

Regarding claims 10 and 21, the combination of Chadwick et al. in view of Morris et al. teaches wherein the identifying step further comprises the server node identifying at least one Y-node required for distributing trust relations between the server node and at least one server-untrusted node (see col. 8, lines 23-37 of Morris et al.).

Regarding claims 11 and 22, the combination of Chadwick et al. in view of Morris et al. teaches wherein said distributing step further comprises sending, by the server node, of a request to the identified at least one Y-node to distribute said trust relations between the server node and the server-untrusted nodes (see col. 8, lines 38-45 of Morris et al.).

Regarding claim 12, the combination of Chadwick et al. in view of Morris et al. teaches wherein said distributing step further comprises obtaining, by the server node, of said requested trust relations (see col. 8, lines 45-49 of Morris et al.).

Regarding claim 13, the combination of Chadwick et al. in view of Morris et al. teaches wherein the step of obtaining the trust relations further comprises:

- Signing, by the Y-node, of the public key of the server node for each server-untrusted node that the Y-node has a trust relation with (see pg. 20, "Certification Path" of Chadwick et al.); and
- Forwarding, by the Y-node, of said signed public key to the server-untrusted node (see pg. 20, "Certification Path" of Chadwick et al.).

Regarding claim 14, the combination of Chadwick et al. in view of Morris et al. teaches wherein the step of obtaining the trust relations comprises:

- Signing, by the Y-node, of the public key of the server-untrusted node for each server-untrusted node that the Y-node has a trust relation with (see pg. 20, "Certification Path" of Chadwick et al.); and
- Forwarding, by the Y-node, of said signed public key to the server node (see pg. 20, "Certification Path" of Chadwick et al.).

Regarding claim 15, the combination of Chadwick et al. in view of Morris et al. teaches comprising the further step of, after obtaining said trust relation, reclassifying, by the server node, the server-untrusted node with the obtained trust relation as being a server-trusted node (see col. 8, lines 45-49 of Morris et al.).

Regarding claims 16 and 23, the combination of Chadwick et al. in view of Morris et al. teaches comprising the further step of sending, by the server node, of a signed message comprising the server node's trusted public keys belonging to trusted

Art Unit: 2136

candidate nodes within the ad hoc communication network (see col. 4, lines 3-8 of Morris et al. and pg. 20, right column, "Cross Certification" of Chadwick et al.).

Response to Arguments

6. Applicant amends claims 1, 6, and 17 and cancels claim 2.
7. Applicant argues:
 - a. Chadwick reference uses multiple Certificate Authorities, which differs from application; there are no CA's involved in the application, the nodes themselves delegate trust to un-trusted nodes (page 10 and 11).
 - b. Dependent claims are allowable based on their dependency on the independent claims (page 11, last paragraph).

Regarding argument (a), examiner disagrees with applicant. Chadwick teaches (page 19, "Trusted Point") that a security domain can be as small as a single user. With that said, rethinking about the independent claims and the thought that Chadwick suggests a separate Certificate Authority for each node is invalid. Each node, consisting of only a single user, does not require the use of its own Certificate Authority, because in essence, the single node is the Certificate Authority. Also, the claims as presented originally never recited the steps of

Regarding argument (b), examiner disagrees with applicant. Based on the arguments set forth by the examiner for argument (a), the dependent claims stand as rejected.

Art Unit: 2136

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandon Hoffman whose telephone number is 703-305-4662. However, my new number will be 571-272-3863 after our October 25 move. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on 703-305-9648. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2136

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
